**Student Research Position: Groundwater-Energy Project**

Interdisciplinary research project involving the Departments of Geosciences, Agricultural & Resource Economics, and Civil & Environmental Engineering

We are seeking to hire a student research assistant to work on a study of energy use during groundwater production in the Denver Basin. Responsibilities include data gathering and development of a well database, GIS mapping and spatial analysis, and energy cost calculations for regions with active groundwater pumping. There will be opportunities for student participation in conference presentations.

Requirements: GIS experience, interest in water resources

Start date: Summer/Fall 2016

Preference will be given to senior undergraduate students. This is a paid position.

To apply: Contact Professor Mike Ronayne (Michael.Ronayne@colostate.edu)
